A Tale of Two People

Jean Tabaka

Charles Sanders Peirce

Johns Hopkins
University

Logic

Authors

Dead or alive?

**“Chance, Love, and
Logic”**

**And I should care about
this why?**

“The sole rule of reason is that, to learn, one needs to desire to learn, and desire it without resting satisfied with that which one is inclined to think.”

“In other words. The first rule is ‘To wonder.’”

We must scale what we do with empathy

George
Kembel

d.school,
Stanford
University

“It is not possible to
prove any new
thought, concept or
idea in advance.”

– Charles Sanders Peirce

**Four barriers to
inquiry:**

**1. Assertion of absolute
certainty**

**2. Maintaining that
something is absolutely
unknowable**

3. Maintaining that something is absolutely inexplicable because it is absolutely basic

4. Holding that perfect exactitude is possible...

...especially such as to
quite preclude unusual
and anomalous
phenomena

An Agile Adoption Story

2002

5000

We created an
algorithm we could
execute/exploit

“Cookbook Agile”

**Why a cookbook
won't do**

Lack of exploration,
lack of empathy and
lack of innovation

“It is not possible to
prove any new
thought, concept or
idea in advance.”

– Charles Sanders Pierce

**We live in a world that
is complex AND
craving innovation**

**We must embrace
vision with hunches,
with exploration and
execution**

**We must leverage
emergence, bring
empathy, and invite
“the wildly
unexpected”**

3 thoughts about Agile

**Don't latch onto
one set of Agile
practices**

**Invite emergence
of Agile practices
and of customer
value**

**Delight in the
innovation your
empathy brings to
your customers**

Thrive versus
merely **survive**

**Complexity gets
complex**

10 Dots

Our world of complexity

**We can't afford to latch
onto recipes of...**

Order

Algorithm

Control

**How design thinking and
complexity theory help
blow things up**

**“What you predict
doesn’t come true.”**

**“What worked yesterday,
doesn’t seem to be
working today.”**

“What you don’t know is unknown.”

**Analysis and
induction alone
cannot manage
complexity**

We **must** invite
abductive logic:
multiple possible
explanations

We **must** invite mystery
to allow innovative
patterns to emerge

How do we make sense of complex environments?

Gaussian probability (“Bell curve) is not sufficient

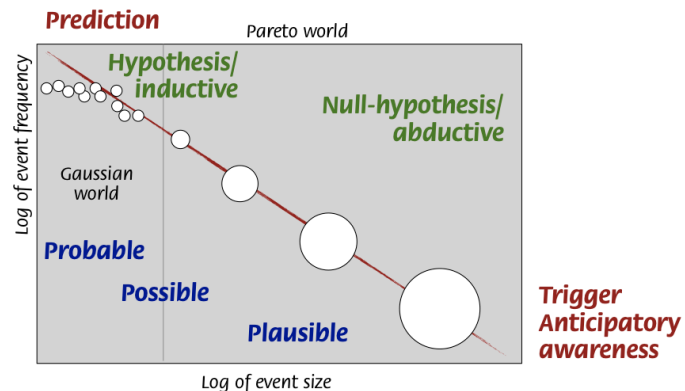

http://en.wikipedia.org/wiki/Normal_distribution

We cannot see the **low** probability, **high** impact events...the outliers

Pareto plausibility seeks outliers

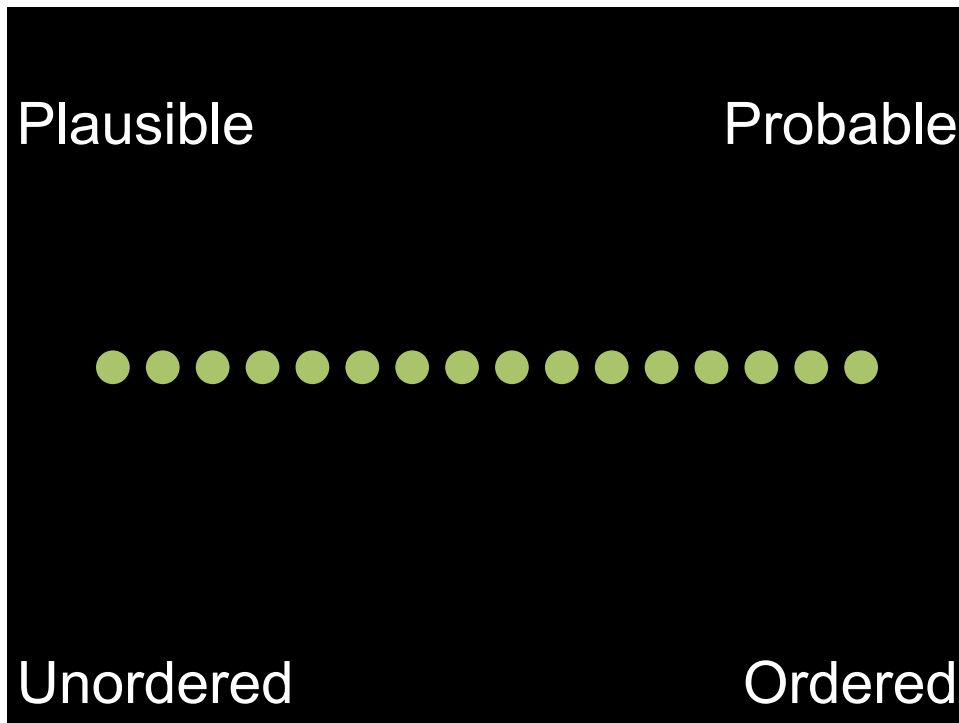

Derived from material created by Max Boisot
Academy of Management Montreal 2010

Empathize
Innovate

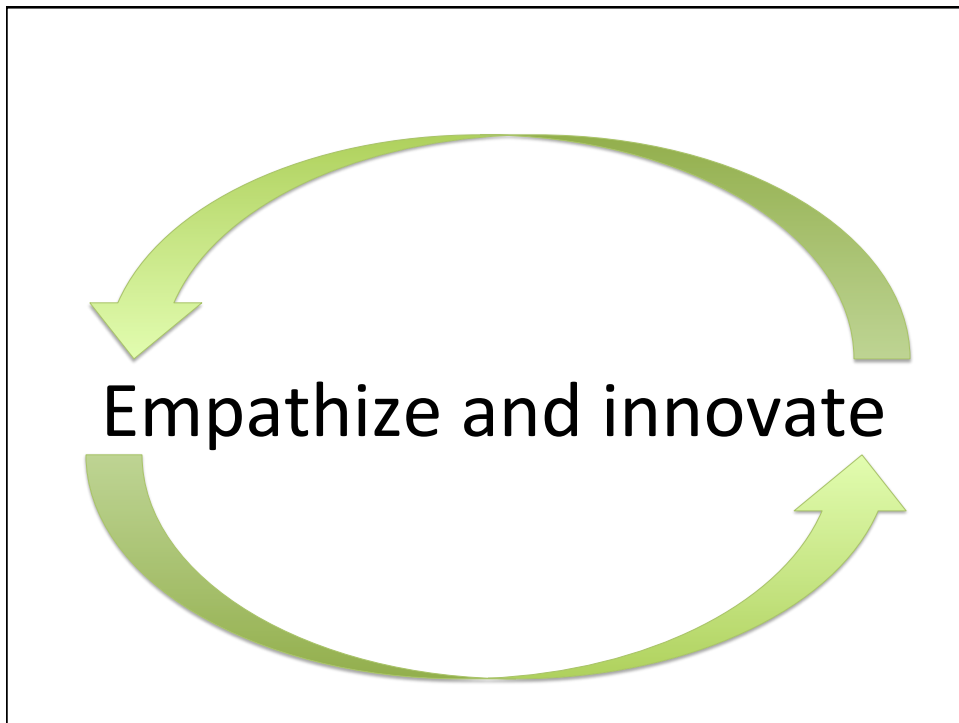

#1 “Future Backwards”

The Future, Backwards

- Current State (CS)
- Turning points backwards from CS
- Heaven
- Hell
- Turning points backwards from heaven
- Turning points backwards from hell
- Accidents on hell or heaven pathway

More restricted case

- Current state
- Turning points backwards from CS, heaven and hell
- Heaven & Hell (marked)
- Accidents

#2 “Gift Giving Experience”

The Virtual Crash Course Playbook

Read ME.

#3 “Empathy Interviews”

Design Thinking and Complexity Theory in Agile

Empathize

Interviewee N: _____

Date: _____

Say
Capture specific quotes or observations from the interview. Note any significant phrases or words that are repeated or used frequently.

Think
Capture phrases that suggest "I think..." or "I believe..." that were specifically related to the user. You might also capture other thoughts or feelings that were related to the user's experience but not directly related to the user's experience.

Do
Capture things you see during user research or when you observe the user's behavior.

Feel
Capture feelings and emotions that the user expressed or observed about the product. You might also capture other feelings and emotions that you infer from actions & behaviors that you observed.

Explicit - What people say and do

Implicit - People think and feel

Define

Interviewee: _____

Date: _____

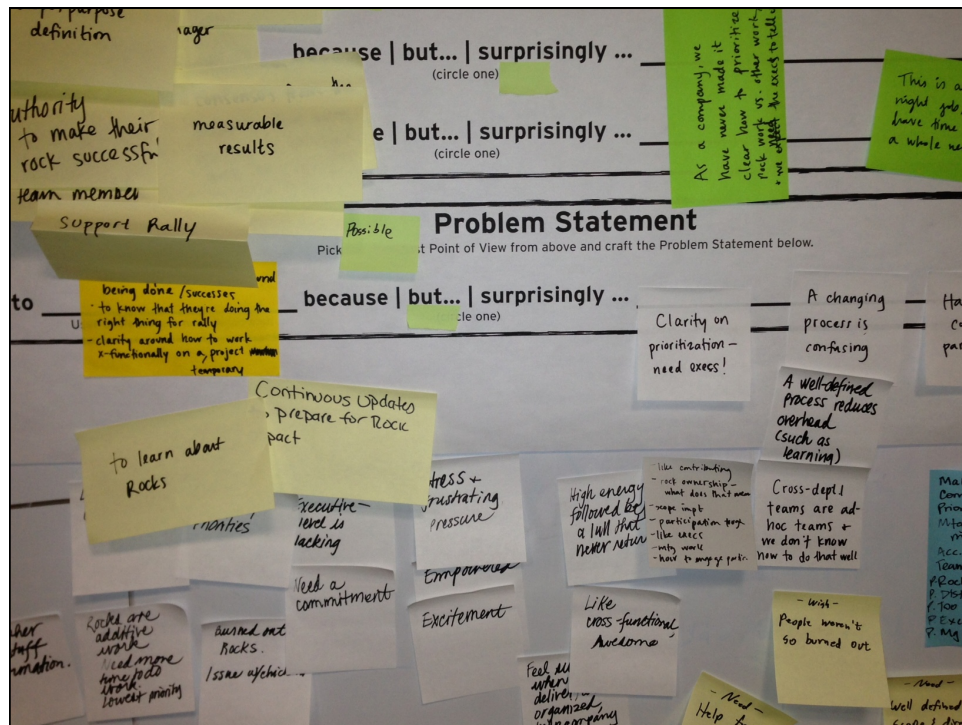

User
Provide descriptions of possible users and their scenarios.

Needs, Goals, and Wishes
Enumerate the needs of those users and the things they are trying to achieve.

Insights
Enumerate the insights you gained by referring to you think about the users and their needs, goals and wishes. What is something you see about your user's experience that maybe they don't see? (Make references)

Possible Points of View
Pick the most meaningful, most... for the most provocative need, and the most provocative insight, bring them together and add a new, compelling problem statement. Experiment with...

but... | surprisingly ...
but... | surprisingly ...
because | but... | surprisingly ...
but... | surprisingly ...

“It is not possible to prove any new thought, concept or idea in advance.”

– Charles Sanders Peirce

**“Seek the wildly
unexpected”**
